PROJECTS

1. IntelliFarm+: AI Crop Planner, Disease Detection and Market Price Forecaster

Final Year Project

- Developed an AI-based decision support system integrating crop recommendation using Random Forest, crop disease detection using DenseNet-based CNNs, and market price forecasting using LSTM.
- Integrated real-time weather forecasting using the OpenWeatherMap API, an AI chatbot assistant powered by the Gemini 2.5 Flash API, and a GPS-based Nearby Shop Finder using Google Maps to locate nearby fertilizer, seed, and agricultural equipment shops.

2. Content-Based Movie Recommendation System

Internship Project

- Built a content-based movie recommendation system using cosine similarity and feature extraction to suggest relevant movies based on user preferences.
- Performed data preprocessing and feature engineering using Python, Pandas, and Scikit-learn to prepare movie data and improve recommendation results.

3. Car Object Detection

Project Competition

- Developed an object detection model to identify cars in images and videos using deep learning and computer vision techniques.
- Used pre-trained models and transfer learning with Python, OpenCV, and TensorFlow/Keras to improve the model's detection performance and efficiency.

4. Satellite-Based Environmental Index Mapping – Godavari Basin

Workshop Project

- Processed Sentinel-2 satellite imagery to calculate NDVI, NDWI, BSI, and IOI indices for environmental monitoring and geospatial analysis.
- Used Python, Rasterio, NumPy, and Matplotlib to analyze spatial data and generate heatmaps for climate and sustainability-related research.
